Attorney's Docket : 11560-003US1 / F/USP82704

In the abstract:

--The invention relates to a vaccine for the treatment of disease caused by Neisseria, the vaccine [comprising] including one or more immunogenic components for Neisseria serogroups, as well as antibodies to the immunogenic components and methods of preventing and treating Neisseria infections. The immunogens are based on elements of the inner core lipopolysaccharide.--
